DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 11-12 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Chen et al. (US 5,545,574).

Chen discloses the limitations:

forming a gate electrode (26, fig.3) on the gate insulating film (24, fig. 2);

depositing a film which inhibits silicidation on the source-drain diffusion layer (52 and 54, fig.5); and

converting the high melting point metal film into a silicide film (72 and 74, fig.7) (col. 3, ln. 5 – col. 4, ln.31).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (US 5,545,574). in further view of Riseman (US 4,356,211).

Art Unit: 2812

5. Chen discloses all the limitations of claims 11-12 except for explicitly stating that the layers (52, 54, fig. 5) are formed by CVD method.

However, Riseman does disclose forming a silicide-inhibiting layer by CVD method (15, fig. 3; col. 3, lns. 7-12).

Therefore one of ordinary skill in the art would combine Riseman with Chen to demonstrate that a thermal reaction using ambient including ammonia reads on CVD methods.

Response to Arguments

6. Applicant's arguments with respect to claims 11-12 have been considered but are moot in view of the new ground(s) of rejection.

Applicant argues that a statement of a thermal reaction using ambient including ammonia does not read on CVD methods. However Riseman states that "... CVD through a thermal reaction of silane and ammonia..." Therefore one of ordinary skill in the art would see the Chen reference as an art recognized equivalent to CVD processing of a layer even though it does not explicitly state it is a CVD method.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

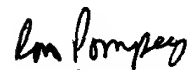

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

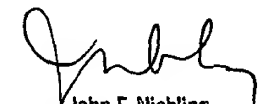

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
